

## Root Out Risk with Proactive Tree Risk Assessment

### WHY DO I NEED A TREE RISK ASSESSMENT?

When it comes to managing commercial properties, safety is non-negotiable. Yet, hidden hazards often lurk where you least expect them—in the trees that line your property. Damaged or unhealthy trees can quickly turn from assets to liabilities, threatening the safety of your employees, visitors, and guests.

### WHAT IS A TREE RISK ASSESSMENT?

We utilize cutting-edge technology, including mobile GIS (ArcGIS Online) and GPS systems, to accurately inventory your trees. This data is then uploaded to a user-friendly web map, giving you full access to your property's tree insights.

**Risk = Probability x Consequences**

### OUR APPROACH

At SavATree, our arborists adhere to the American National Standards Institute (ANSI) A300 Tree Care Standards (Clause 13 - Tree Risk Assessment), using the industry standard methodology. This approach identifies potential hazards before they escalate into costly liabilities to help you prioritize tree management decisions.

A proactive Tree Risk Assessment from SavATree is not just a precaution; it's an essential strategy to safeguard your property.

### WHY SAVATREE?

SavATree Consulting Group has been a trusted leader in urban forestry and arboriculture for over a decade. We gather data and recommend options to help our clients make informed tree management decisions. Our ISA-certified arborists deliver detailed, responsive, ongoing support to commercial clients.

## WE OFFER THREE LEVELS OF TREE RISK ASSESSMENT:

- **Level 1: Limited Visual Tree Risk Assessment:** A limited-view assessment through foot patrols or drive-by surveys.
- **Level 2: Basic Tree Risk Assessment:** A 360-degree, ground-based visual observation focusing on visible roots, trunks, and crowns to detect structural defects.
- **Level 3: Advanced Tree Risk Assessment:** An in-depth evaluation, which may include tissue testing, aerial inspections, or resistance drilling.

These assessments are integral to a Tree Management Plan tailored to the specific needs of your commercial property.

## COMPREHENSIVE RISK MITIGATION

After identifying the risks, SavATree's consulting arborists roll up their sleeves to craft a range of tailored mitigation options that fit your property's unique needs. We find the best way to keep your trees healthy and your property safe, using the most effective and minimally invasive solutions, including:

- Disease treatment
- Fertilization
- Structural support systems
- Pruning
- Removal

## TREE RISK = PROBABILITY X CONSEQUENCES

PROBABILITY	CONSEQUENCES			
	Negligible	Minor	Significant	Severe
Very likely	Low	Moderate	High	Extreme
Likely	Low	Moderate	High	High
Somewhat likely	Low	Low	Moderate	Moderate
Unlikely	Low	Low	Low	Low
